Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-41, 75-85 are drawn to a method of inhibiting desiccation from ornamental plants and parts, classified in class 514, subclass 2.
- II. Claims 42-74 are drawn to a method of inhibiting desiccation from transgenic plants and part , classified in class 800, subclass 278.

The inventions are distinct, each from the other because:

Invention I is a method used on normal plants when invention II is a method used on transgenic plants. Inventions I and II are distinct because they have different steps and requirements from one another. The method of Group I does not require the transformation of a plant with a DNA molecule encoding a hypersensitive response elicitor polypeptide or protein. The method of group II does not require application of protein to the plant.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and a different search is required for the two groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
